

dbQwikSync Pro

"Liberate your database!"

Product Information

dbQwikSync is the fastest way to move your data around. It is a powerful easy to use tool to migrate and synchronize data and tables between databases.

dbQwikSync has an easy to use wizard interface that walks you through the process. It can read data from a variety of database formats. It converts between different database types; move from MS SQL, MS SQL Sever Express, MS Access, MySQL, Excel, Paradox, Foxpro, DBase to MySQL, MS SQL, MS SQL Express or MS Access; Creates table and indexes automatically.

Additionally, you can clone and design new tables on the fly. You can map columns of unlike tables, foe example you can map "Customer ID" to "CustNB" in the target table. Column maps can be saved for reuse. You can imports and exports SQL Scripts, XML, Excel, CSV and HTML. A schema report is also available to help manage data migrations.

Benefits

dbQwikSync offers many benefits to move databases to different database types.

- Moving data to your web server
- Creating new database tables in your database.
- Synchronizing changes between copies of a database.
- Up sizing desktop databases
- Creating restore points of test data for software testing.
- Sharing data with others who may not use the same format as you.
- Merging a remote database into a local one.

Features

dbQwikSync PRO is has many useful features to enable you to manage your data.

- **Automatically Creates Tables** on your Target, based on local database table definitions
- **Creates Index** on your Target based on local database table definitions
- **Moves data** between databases
- **Freshen Data:** Add new records, update matched records or both.
- **Import / Export:** tables and data in the form of XML and SQL Scripts
- **Design Tables:** on the either source or target database
- **Flexible Sources:** Supports multiple local database formats
- **AutoCreate Tables Only** without moving data
- **Preview Table Data:** see what data is in your ables
- **Map columns:** between tables with unlike column names.
- **View Table Schemas:** Check column names, data types, optional, and indexes on either source or target.
- **Report:** on table schema.
- **Log File Generation:** shows exactly what happened during a move.
- **Query** and other datasets can be moved allowing you to move subsets of data or combine tables.
- **Drop Tables:** delete unwanted tables.
